Determination of Patent Term Adjustment under 35 U.S.C. 154 (b) (Applications filed on or after May 29, 2000)

The Office has discontinued providing a Patent Term Adjustment (PTA) calculation with the Notice of Allowance.

Section 1(h)(2) of the AIA Technical Corrections Act amended 35 U.S.C. 154(b)(3)(B)(i) to eliminate the requirement that the Office provide a patent term adjustment determination with the notice of allowance. See Revisions to Patent Term Adjustment, 78 Fed. Reg. 19416, 19417 (Apr. 1, 2013). Therefore, the Office is no longer providing an initial patent term adjustment determination with the notice of allowance. The Office will continue to provide a patent term adjustment determination with the Issue Notification Letter that is mailed to applicant approximately three weeks prior to the issue date of the patent, and will include the patent term adjustment on the patent. Any request for reconsideration of the patent term adjustment determination (or reinstatement of patent term adjustment) should follow the process outlined in 37 CFR 1.705.

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at 1-(888)-786-0101 or (571)-272-4200.

OMB Clearance and PRA Burden Statement for PTOL-85 Part B

Notice of Pre-AIA or AIA Status

The present application, filed on or after March 16, 2013, is being examined under the first inventor to file provisions of the AIA.

Allowable Subject Matter

Claims 1-4, 6 and 8-11 are allowed.

The following is an examiner's statement of reasons for allowance: Independent claim 1 identifies the uniquely distinct features of a sound signal streaming channel includes: an input gain unit for initial amplification of the sound signal; a first Multi-band Equalizer or Pre-Equalizer for initial adjustment of frequency components within the sound signal by strengthening or weakening energy of specific frequency components of the sound signal to achieve equalization; a Multi-band Compressor to split the equalized sound signal into different frequency bands and compress them independently for eliminating noised frequency bands and to control the sound signal including increasing clarity of the sound signal by sending specific frequency bands thereof to the speaker; a second Multi-band Equalizer or Post-Equalizer for final adjustment of frequency components within the sound signal from the Multi-band Compressor by strengthening or weakening energy of specific frequency components of the sound signal to achieve equalization; and a Single band compressor/limiter to reduce static and repeating noises including hissing sounds of the microphone in the sound signal from the second Multi-band Equalizer.

The closest prior art, Rader et al. (US 7529545 B2) discloses a mobile phone based hearing loss correction system, comprising: a microphone unit; a speaker unit; and a mobile phone inbuilt application processor to operatively connect said microphone unit with said speaker unit for recording environmental sound signal through the microphone unit; and storage

free direct streaming of said recorded sound signal to the speaker unit upon real time amplification and background noise, the speaker unit comprises headphones or speakers remotely connectable to the mobile phone in wired or wireless manner for receiving amplified and background noise suppressed streaming sound signal from the application processor and playing the same, the application processor is configured to directly stream the sound signal from the mobile phone inbuilt microphone to the headphones or speaker units upon real time amplification and background noise suppression without involving any storage elements of the mobile phone and operates based on user's instruction from user interface of the mobile phone and the application processor includes sound signal streaming channel having multiple bands of frequencies in range of 30Hz to 20000Hz for dividing the sound signal into different streaming bands of frequencies for configurable filtering of said different streaming bands based on noises reside in therein and controlling the streaming sound signal; and Lloyd (US 8922485 B1) discloses a mobile device comprising an omni-directional microphone to record environmental sound and generate the sound signal for the application processor.

The prior art fails to teach a sound signal streaming channel includes: an input gain unit for initial amplification of the sound signal; a first Multi-band Equalizer or Pre-Equalizer for initial adjustment of frequency components within the sound signal by strengthening or weakening energy of specific frequency components of the sound signal to achieve equalization; a Multi-band Compressor to split the equalized sound signal into different frequency bands and compress them independently for eliminating noised frequency bands and to control the sound signal including increasing clarity of the sound signal by sending specific frequency bands thereof to the speaker; a second Multi-band Equalizer or Post-Equalizer for final adjustment of frequency components within the sound signal from the Multi-band Compressor by

strengthening or weakening energy of specific frequency components of the sound signal to achieve equalization; and a Single band compressor/limiter to reduce static and repeating noises including hissing sounds of the microphone in the sound signal from the second Multi-band Equalizer. The prior art fails to anticipate or render the independent claim obvious.

Conclusion

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
